<b>Condition:</b> Internal medicine; General pharmacology; Special pharmacology			
<b>Course aim</b> The aim of this course is to train future general practitioners to prepare and assess surgical patients; inform them about techniques of general and regional anesthesia, general measures of intensive care, as well as about intensive care in special pathological conditions. Therapy of acute and chronic pain and cardiopulmonary resuscitation.			
<b>Expected outcome of the course:</b> Preoperative assessment and preparation of surgical patients. Specific features of general and regional anesthesia. Identification, diagnosis, monitoring and treatment of emergency patients with special review of pathological conditions (injuries, burns, sepsis, shock, pancreatitis etc.). Acute and chronic pain assessment. Cardiopulmonary resuscitation in all age groups and clinical conditions. Intubation and venous catheterization. Other modes of drug application. Algorithms of preoperative preparation. Monitoring of the critically ill. Infusion of electrolytes, blood and blood derivatives. Postoperative pain assessment and therapy.
